

Data Visualization

Agenda

1. Color Vision Deficiency (CVD)
2. Accessibility for CVD Examples
3. Visualization Example
4. Coursera Data Visualization Course
5. Questions

Color Vision Deficiency (CVD)

Color Vision Deficiency (CVD)

- Persons with **CVD**:
 - colors most people see as different will look the same for them
- **Colorblindness** is not the most accurate term
 - instead, use **CVD**

CVD Studies

- **Red-green CVD**

- About **8% of men**

- 6% of men have deuteranomaly (green-weak) & deuteranopia (green-blind)

- 2% of men have protanomaly (mild) & protanopia (severe)

- About **0.5% of women**

- **Blue-yellow CVD**

- About **5% of all CVD cases**

- **CVD** doesn't mean: person can't see color

- unless in very rare cases (1 in 33,000)

CVD Commonly Referred to as

- **red weak**
- **green weak**
- **red-green colorblindness**

Data-viz Rule

Don't use red & green together

CVD-friendly Designing Tips

1. Red and green together can be problematic.
2. Be aware that it's not just red and green.
3. Use a CVD-friendly palette when appropriate.
4. If you must use red and green together, you can:
 - a. leverage light vs. dark
 - b. stand each color (red and green) alone
 - c. offer alternate methods of distinguishing data
 - d. use a checkbox (or similar GUI) to switch the color palette to a CVD-friendly palette

Tip 1) CVD Simulation Example

- color is needed to tell
 - a good number vs. a bad number in a table
 - one line vs. another line in the same line chart
 - a good square from a bad square
- We can see how difficult this would be in the chart

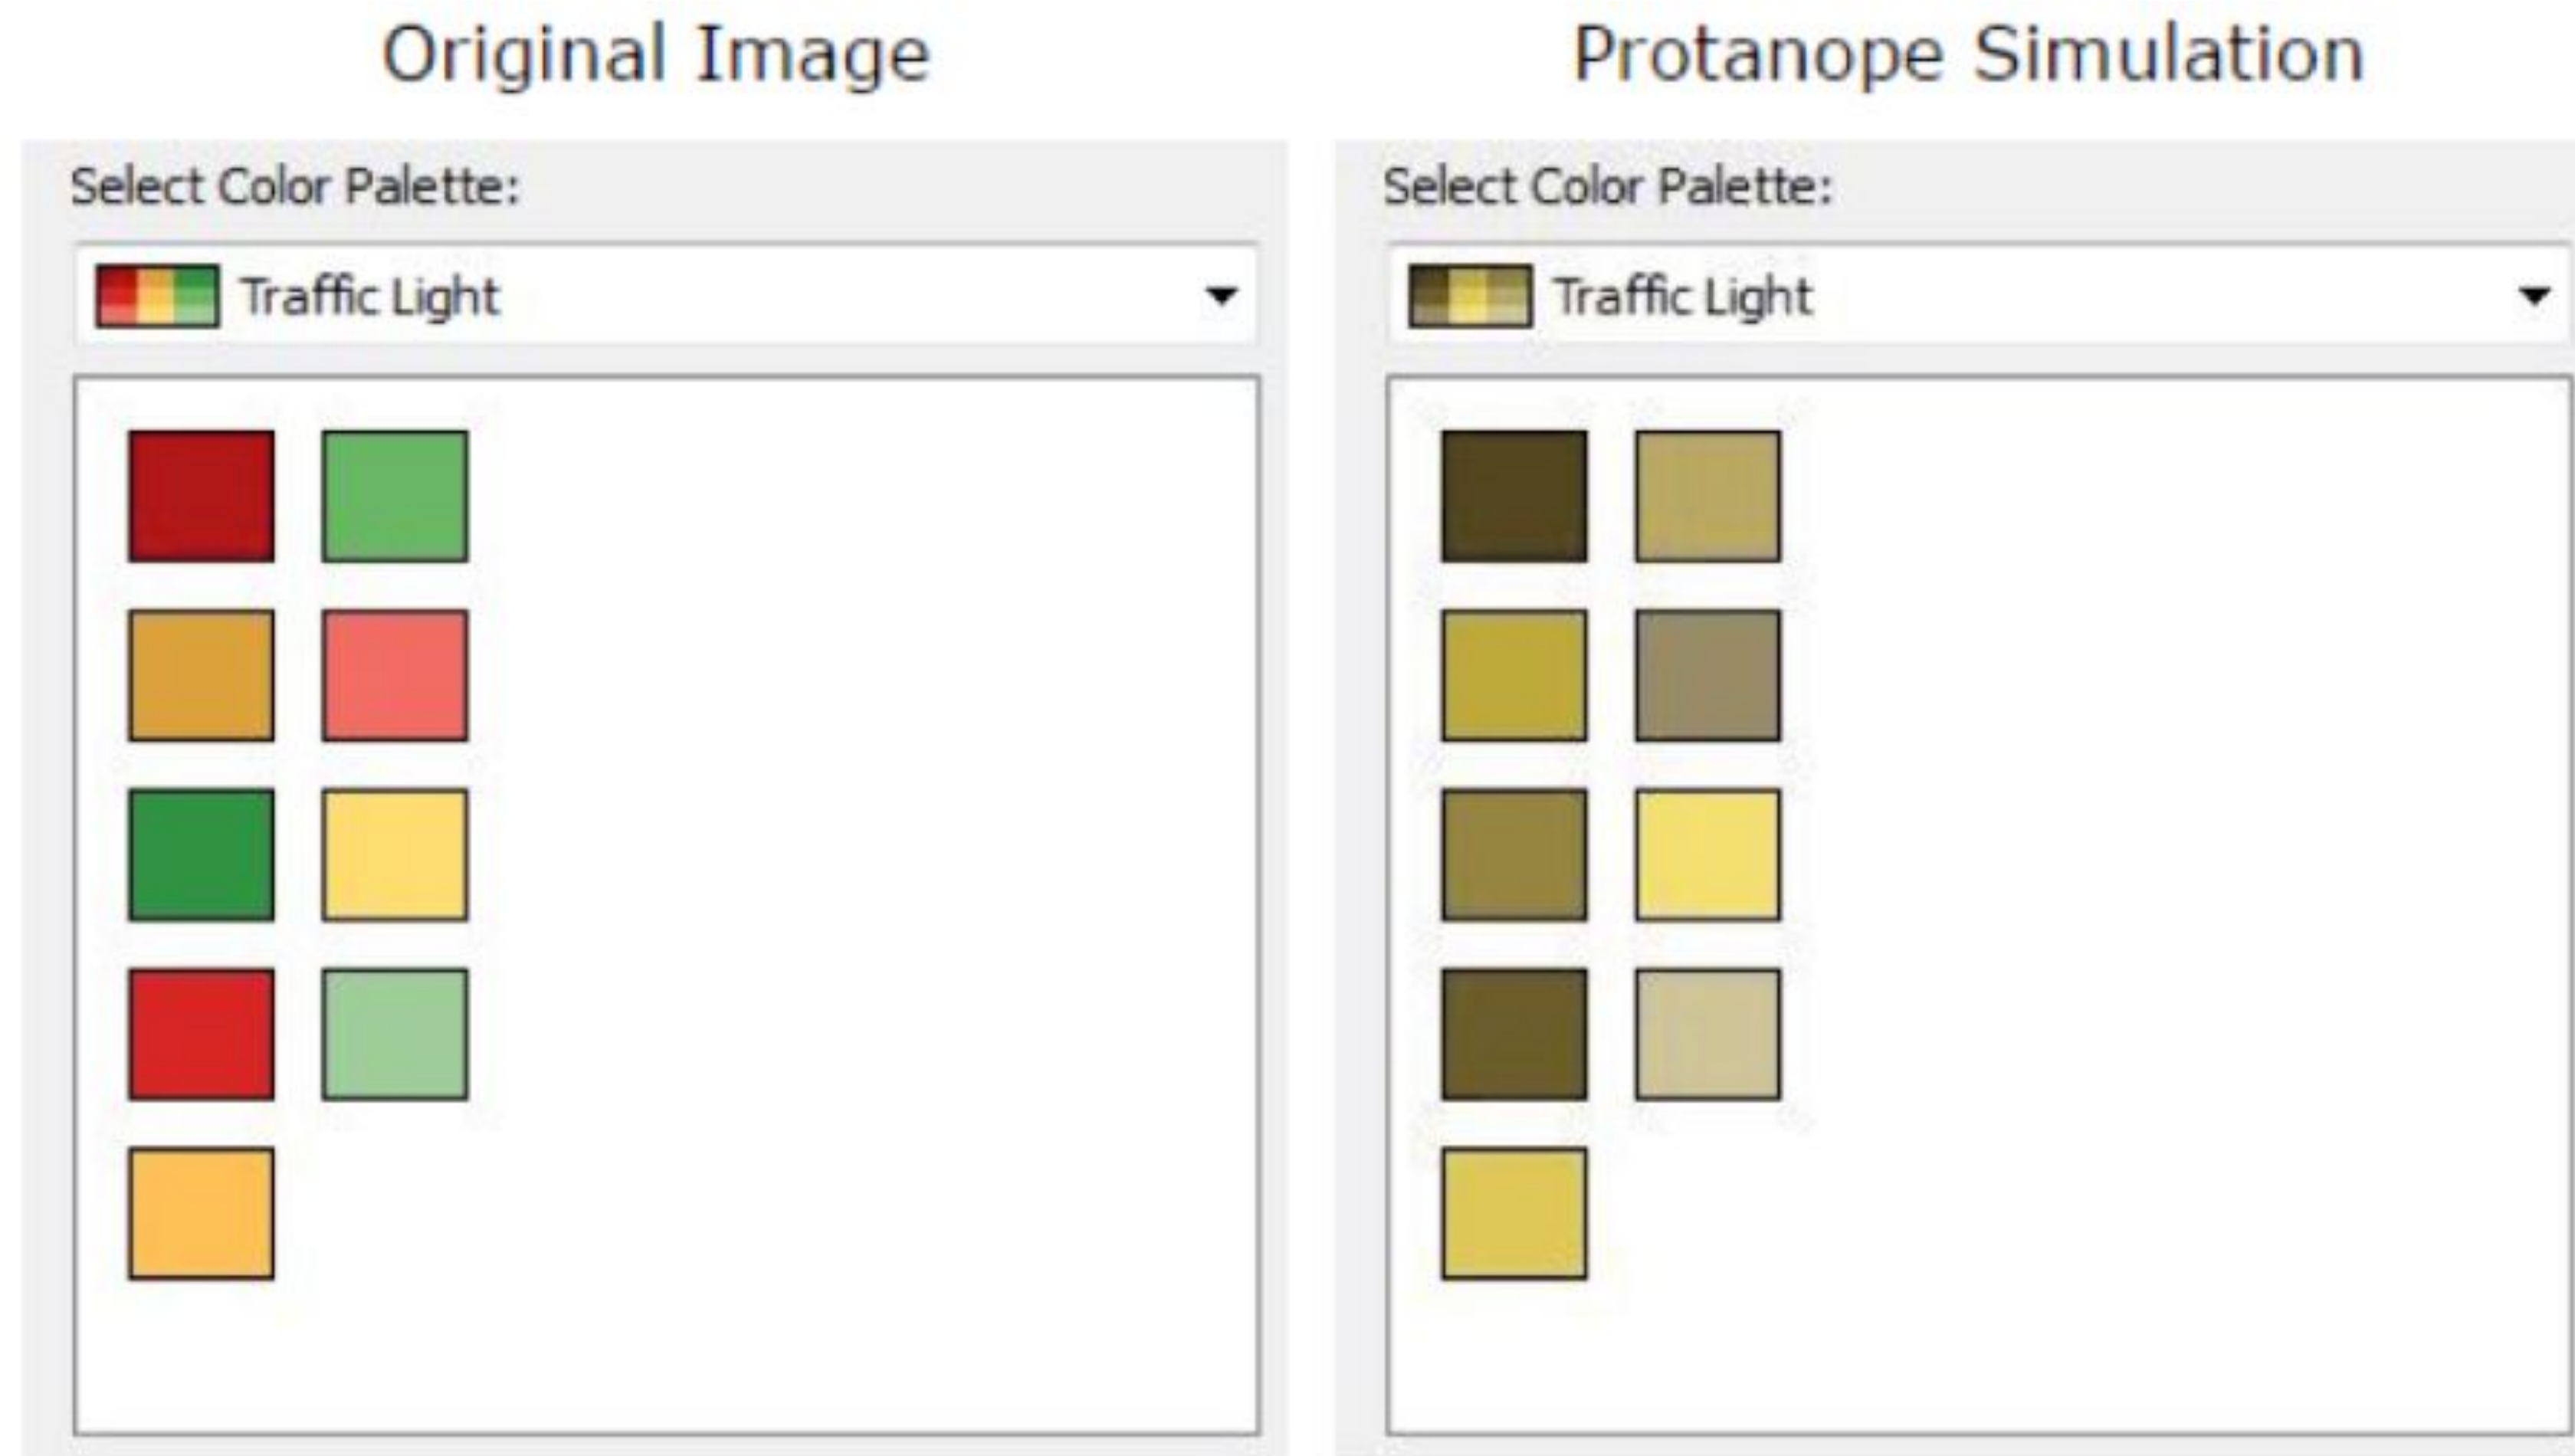

Tip 2) More Complex Than Red vs. Green

- For someone with **strong CVD**
 - **red & green & orange** all can appear **brown**
 - Maybe more accurate to say: Don't use **red & green & brown & orange** together
 - In the RGB model: orange is RGB(255,165,0) & brown is RGB(150, 75, 0)
- Also, when mixing colors, they can be problematic.
 - **Example:** using **blue & purple** together
 - In the RGB model, **purple** is RGB(160,32,240)
 - If someone has issues with **red**, they may have issues with **purple** (appear **blue**)
- Also, **gray & pink** or **gray & brown** can be problematic.

Tip 2) Deuteranope Simulation

Tip 2) Protanope Simulation

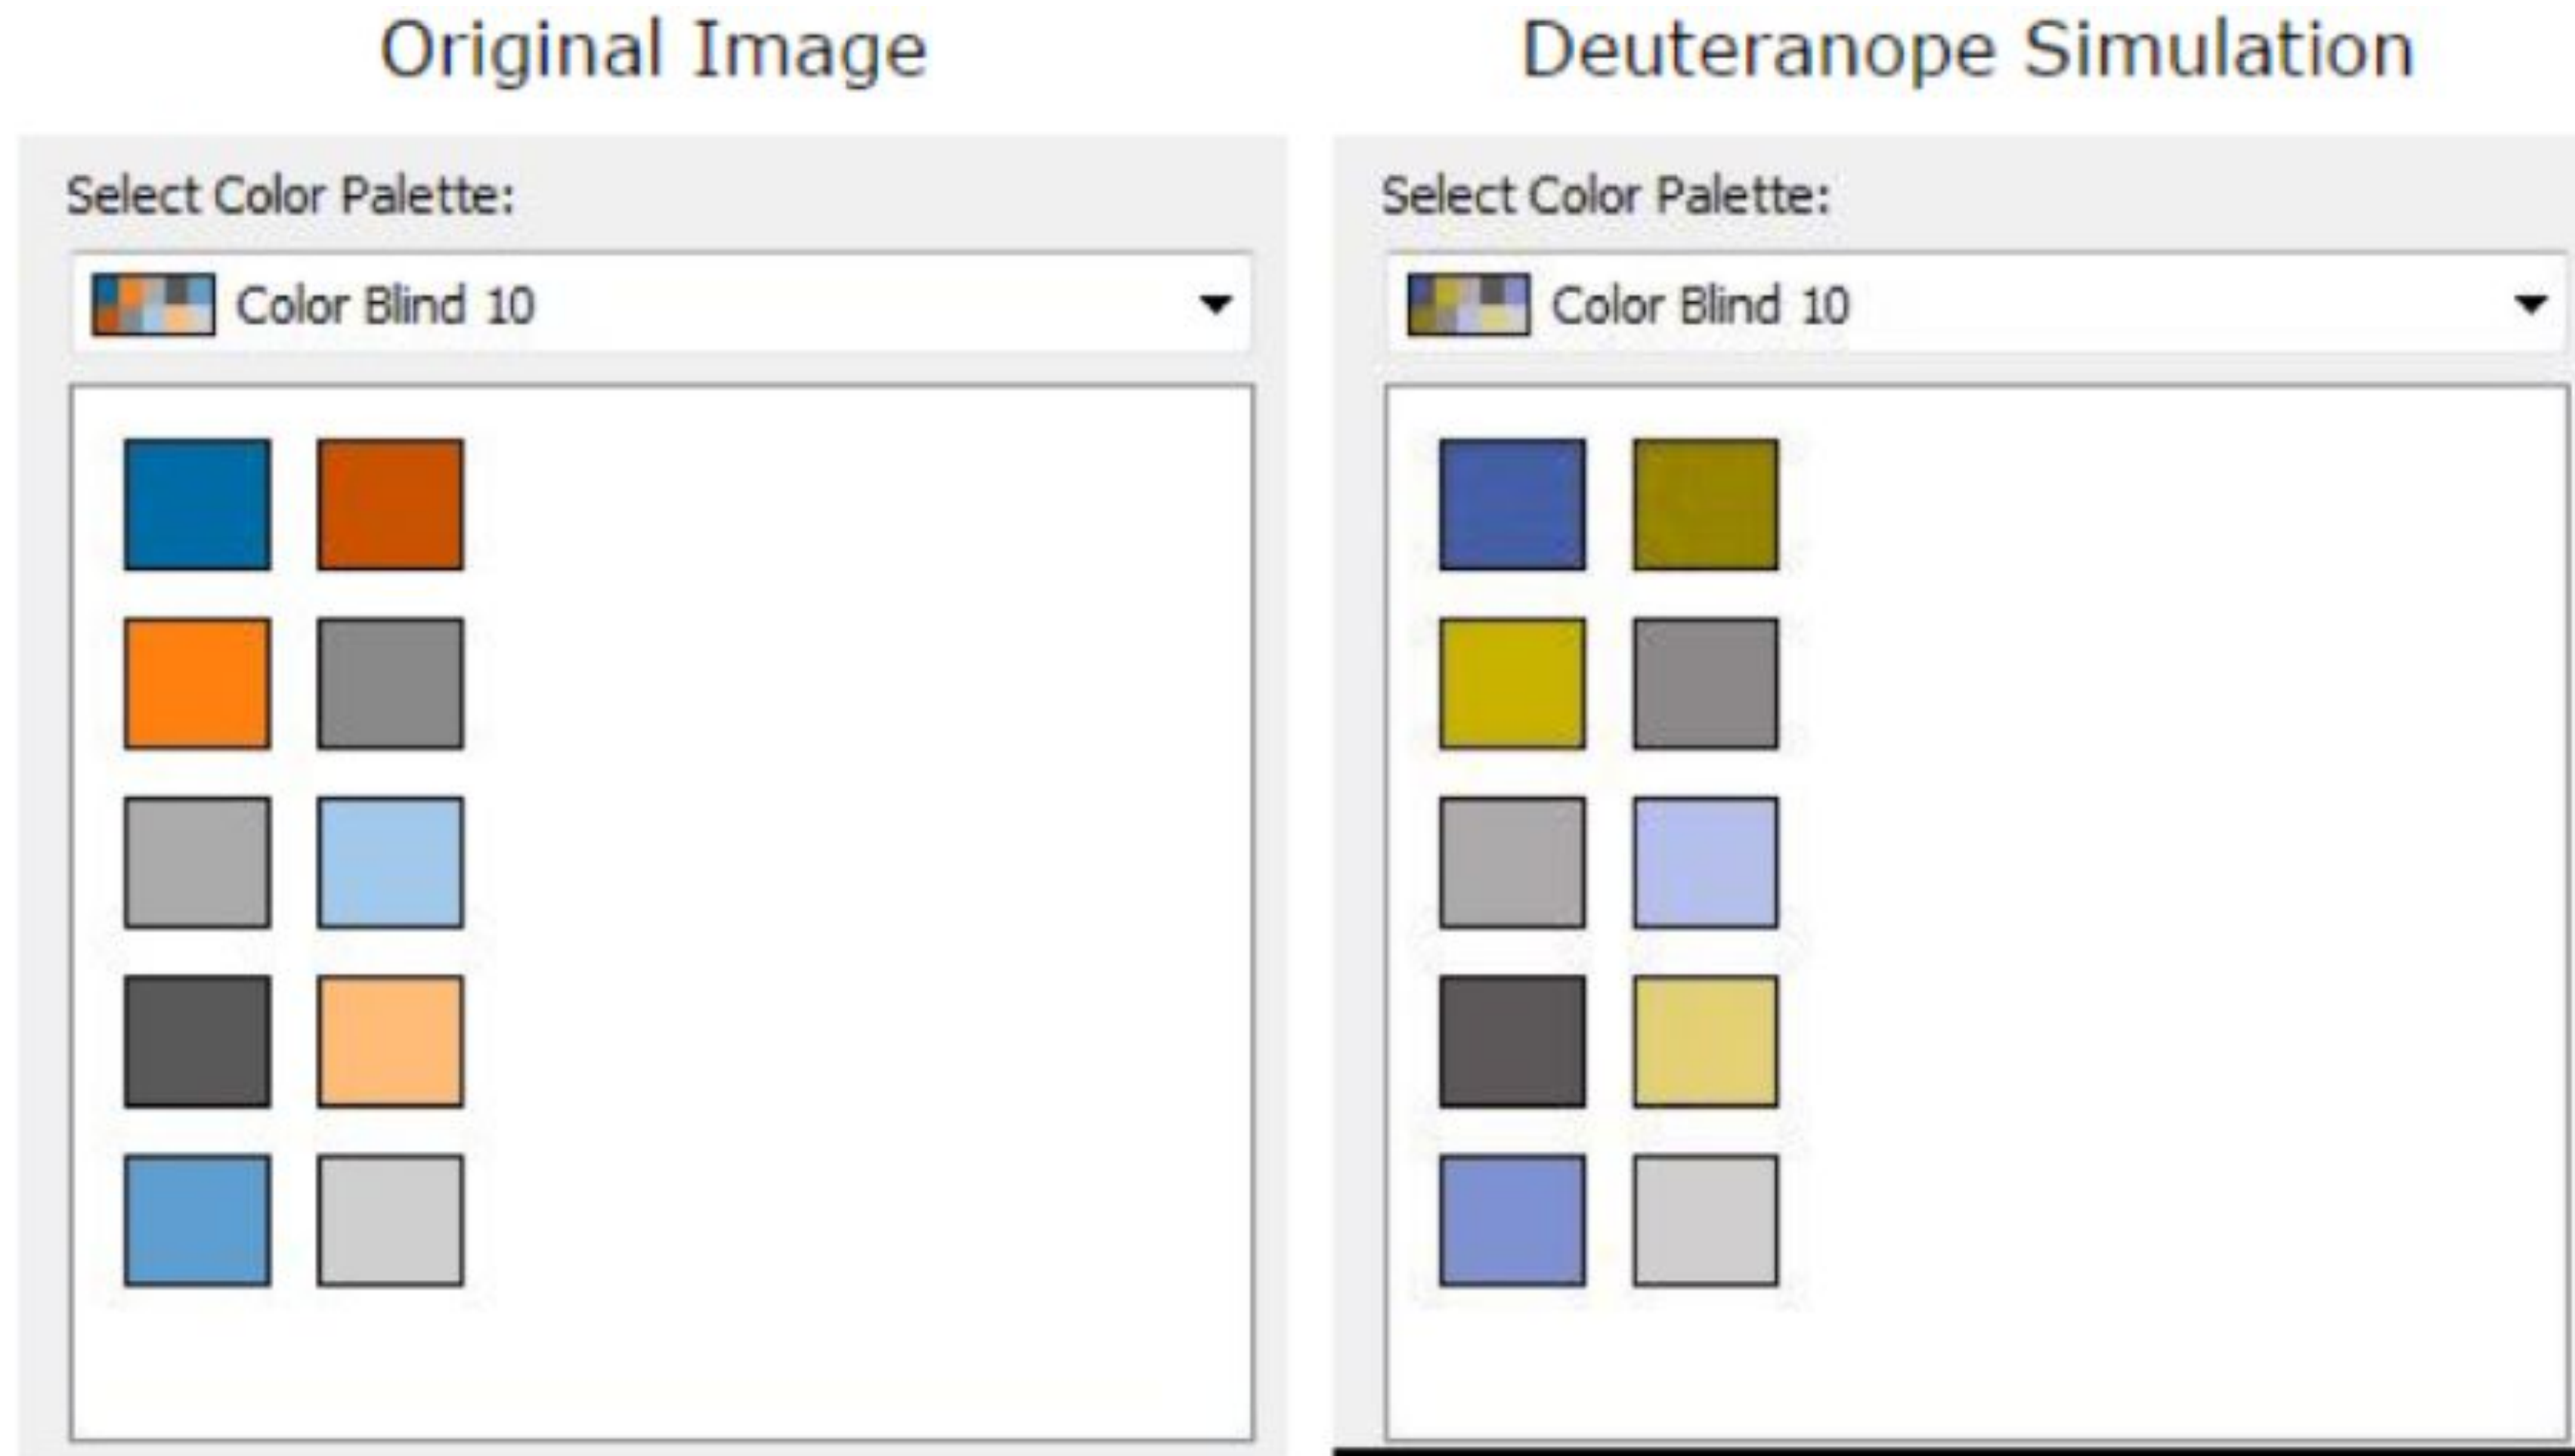

Tip 3) CVD-friendly Palette

- One color combined with another color is generally fine
 - when one of them is not usually associated with CVD
- For the most common conditions of CVD
 - **blue** would generally look **blue**
 - **Examples:**
 - **blue/orange** is a common CVD-friendly palette
 - **blue/red** or **blue/brown** would also work

Tip 3) Deuteranope-friendly Palette

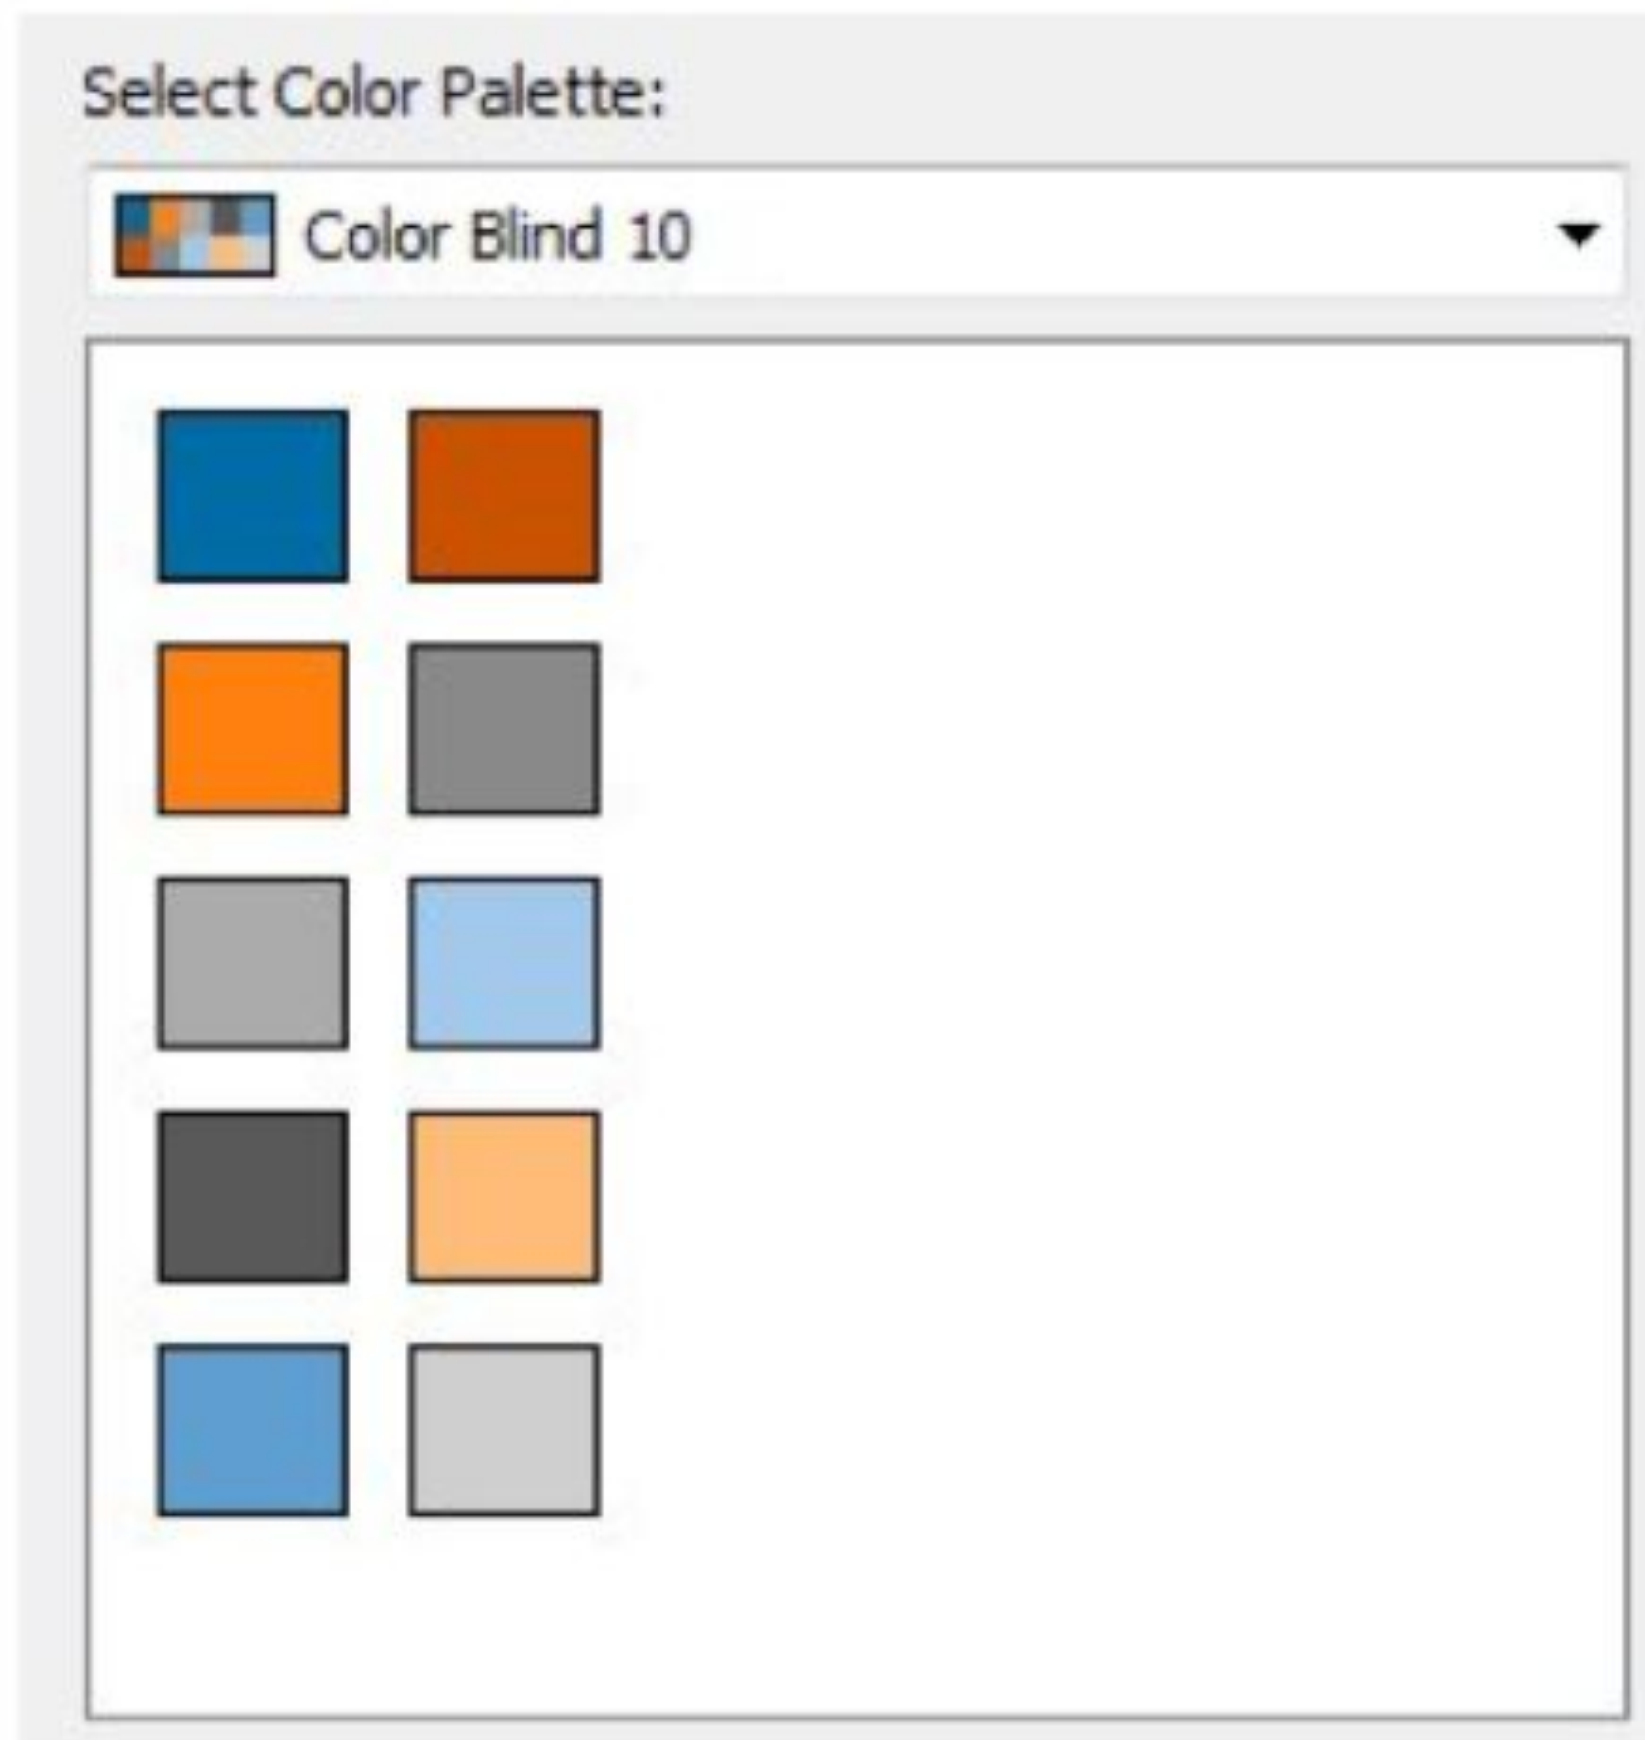

Deuteranope = green-blind

Tip 3) Protanope-friendly Palette

Protanope = red-blind

Original Image

Protanope Simulation

Tip 4-a) Leverage Light vs. Dark

- The problem with **CVD** is **red vs. green** and not **light vs. dark**.
- Almost anyone can tell the difference between:
 - **very light color** and **very dark color**
- To use red and green together, we can use:
 - **light green**
 - **medium yellow**
 - **very dark red**
- Someone who has strong **CVD**:
 - would see as a **sequential color scheme**
 - would at least be able to distinguish based on **light vs. dark**

Tip 4-b) Stand Each Color Alone

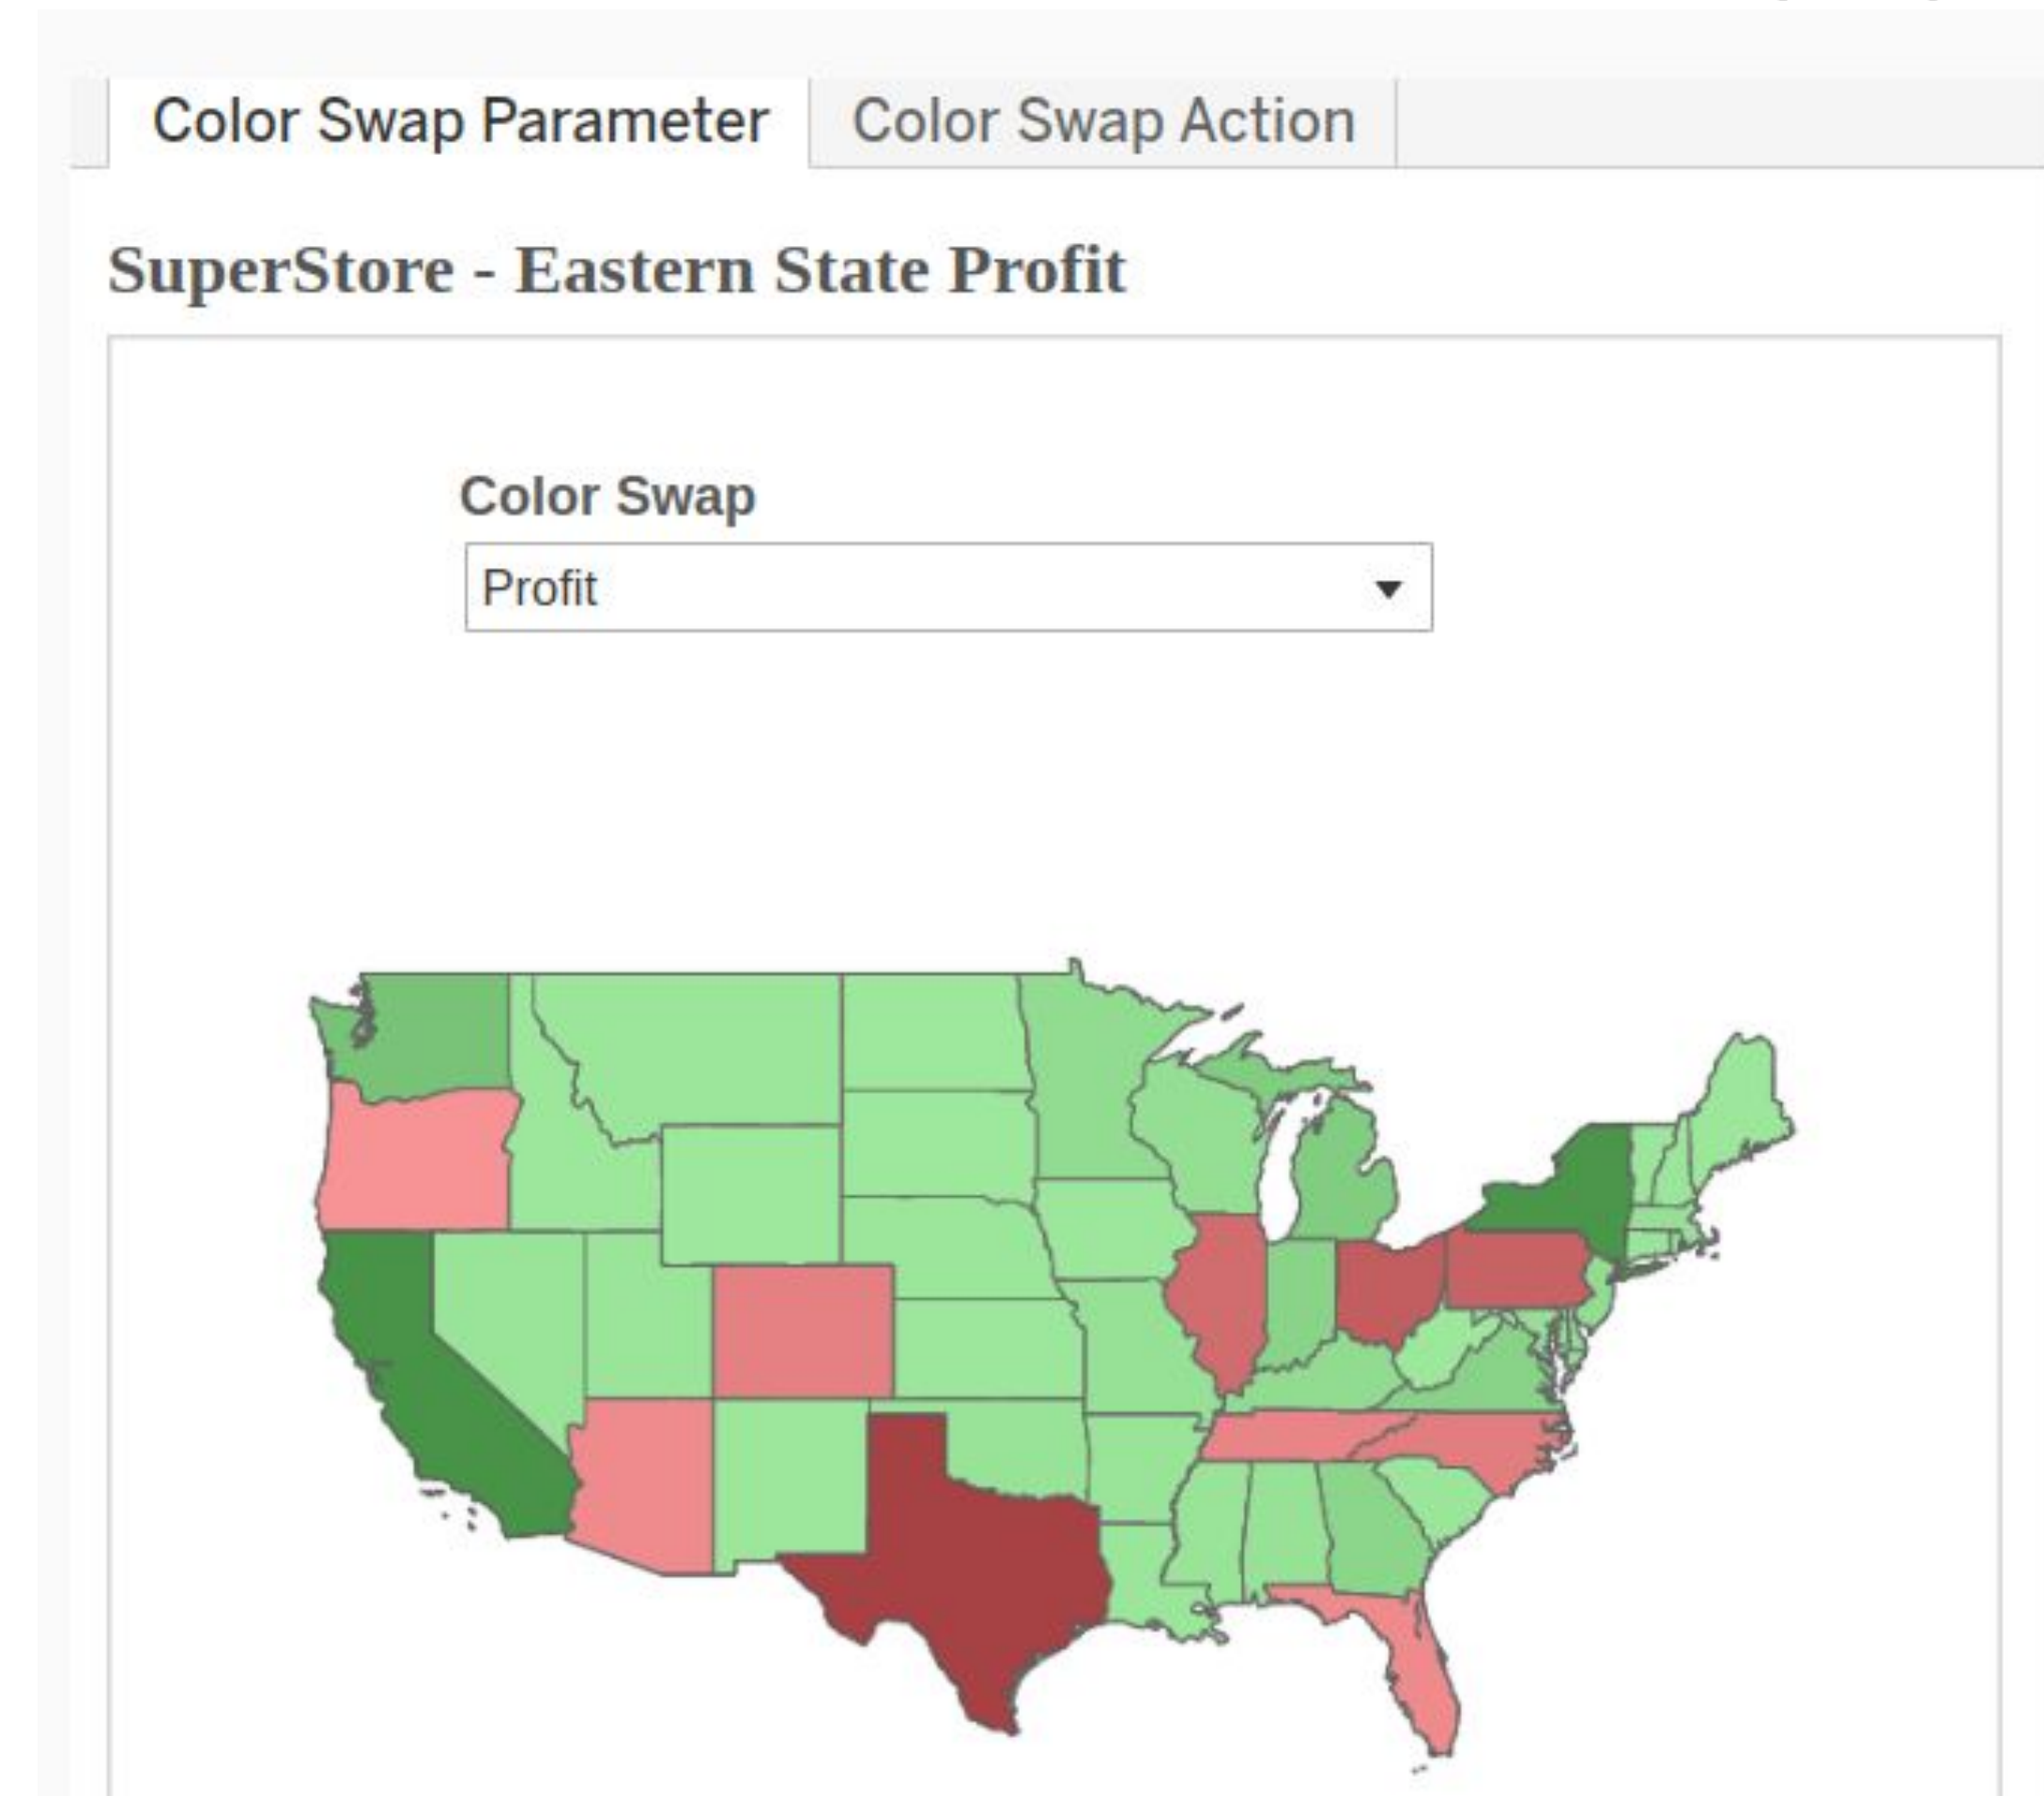

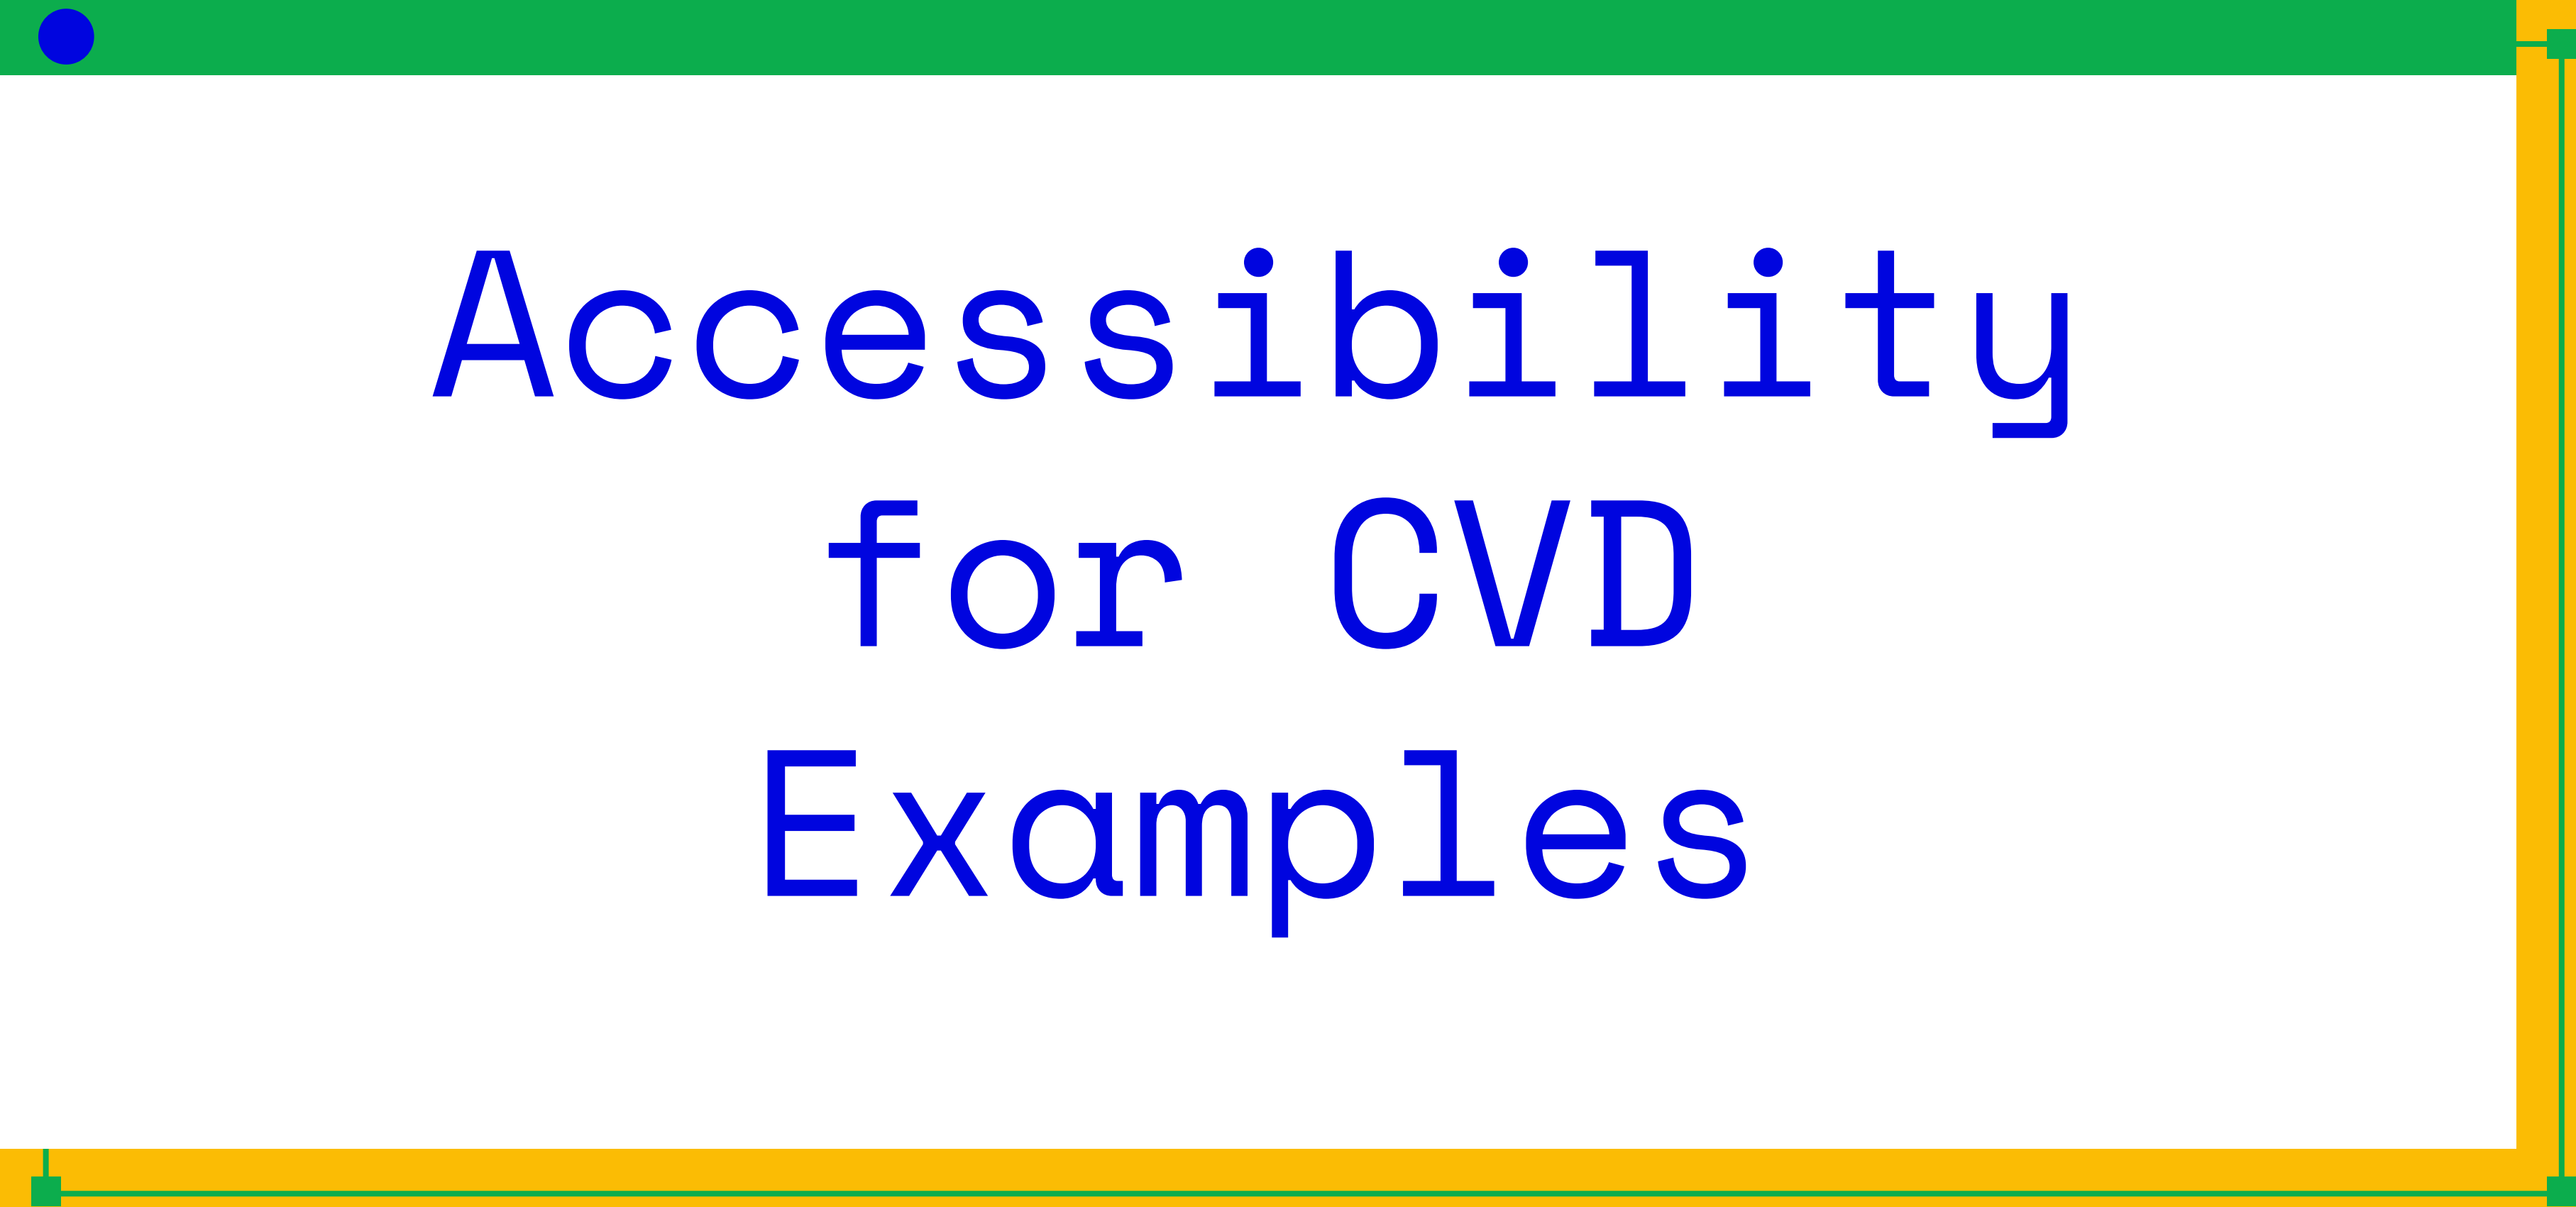

Tip 4-c) Alternate Distinguishing Methods

- Add indicators to allow to see that something is bad (red) vs. good (green), such as:
 - icons
 - directional arrows
 - labels
 - annotations
 - other indicators

Tip 4-d) Use a UI element to Switch Color Palette

- Use a checkbox (or similar GUI) to switch the color palette to **CVD-friendly Palette**

The screenshot shows the Coursera interface for the course 'Data Visualization with Python'. At the top, the Coursera logo is on the left, and a blue 'Explore' button with a dropdown arrow is on the right. Below the logo, the breadcrumb 'Browse > Data Science >' is visible. The course title 'Data Visuali' is prominently displayed in white on a dark blue background. Below the title, there is a 4.5-star rating with 10,360 ratings. A profile picture of Saishruthi Swaminathan is shown next to her name. A large grey button labeled 'Enroll for Free' with 'Starts Oct 9' below it is centered. At the bottom, it states '174,727 already enrolled'.

Step 2 of 2

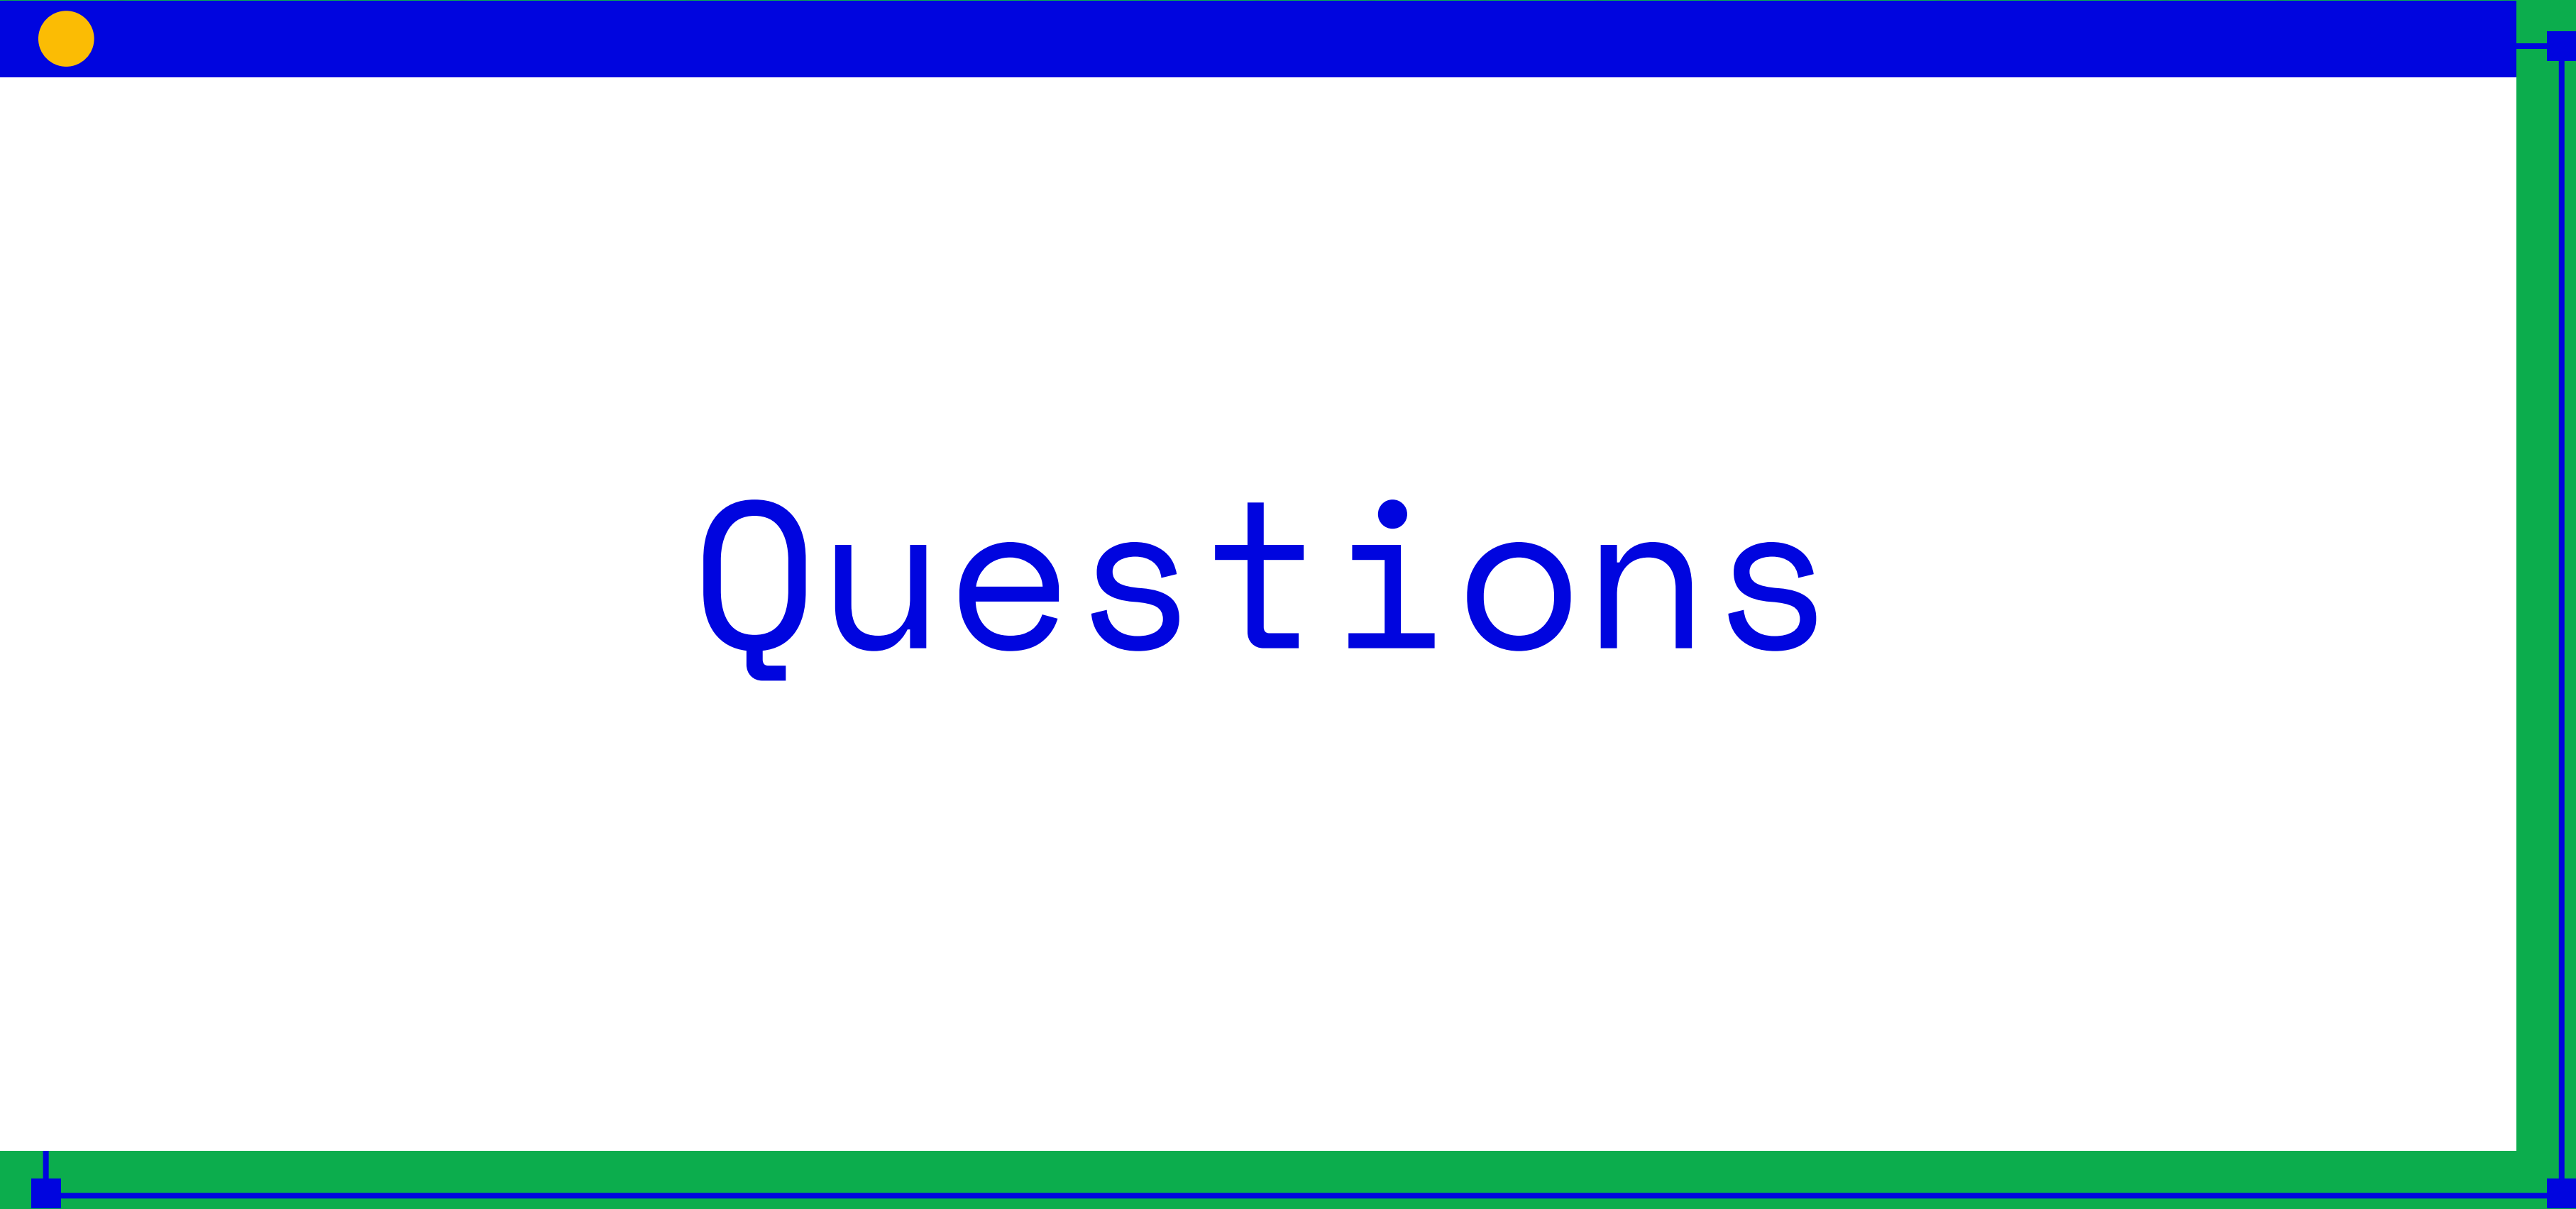

7-day Free Trial

Data Visualization with Python is part of the larger IBM Data Science Professional Certificate. Your 7-day free trial includes:

- ✓ **Unlimited access to all courses in the Certificate**
Watch lectures, try assignments, participate in discussion forums, and more.
- ✓ **Cancel anytime.**
No penalties - simply cancel before the trial ends if it's not right for you.
- ✓ **\$39 USD per month to continue learning after trial ends.**
Go as fast as you can - the faster you go, the more you save.
- ✓ **Certificate when you complete.**
Share on your resume, LinkedIn, and CV.
