# Data Science Intro

# Data Science

- combines several disciplines including:
  - a. Math
  - b. statistics
  - c. computer science
- How to become a **Unicorn** in **Data Science**?

# Data Science Jobs

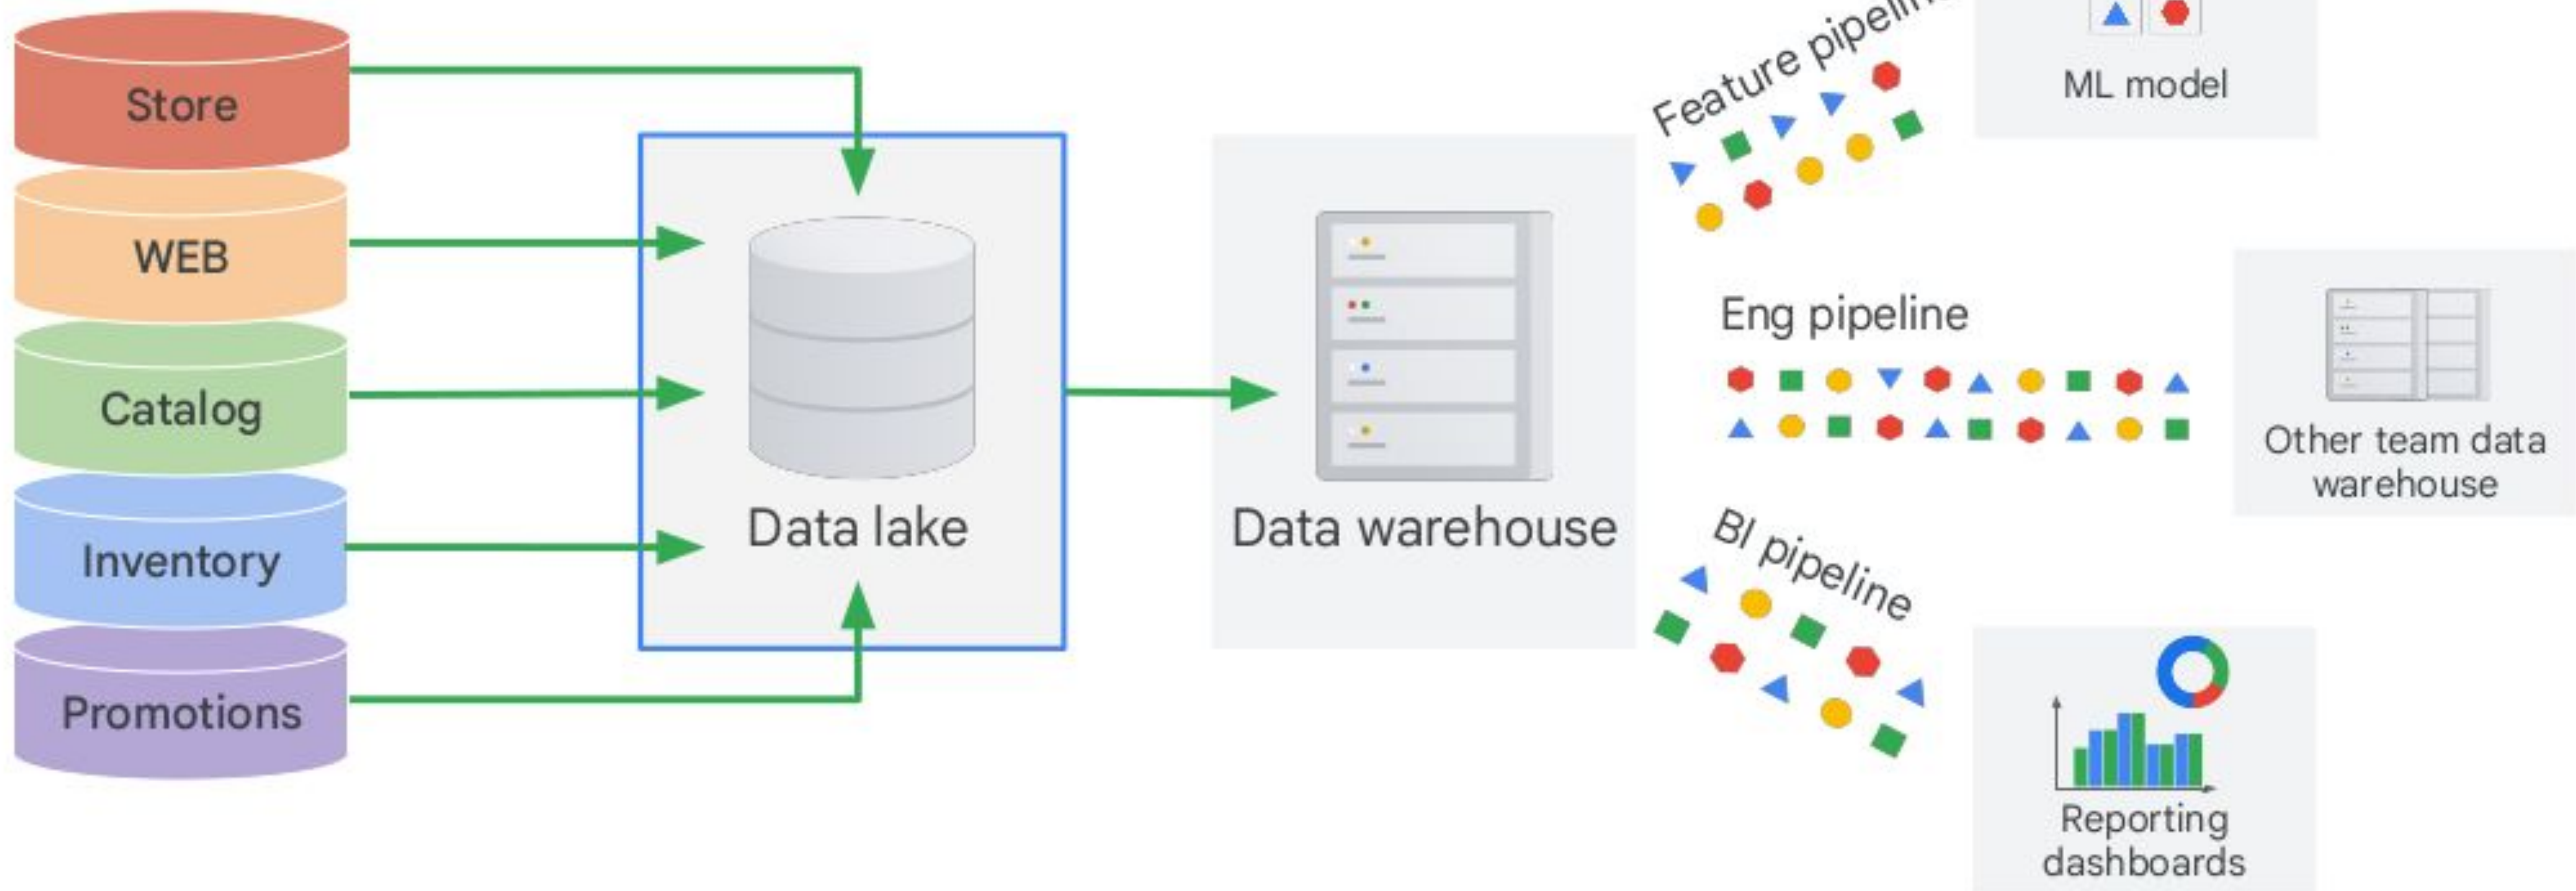

# Data Science Jobs: Long-lasting Career

# Data Science Jobs: Where is the role of each?

## Operational systems

# Data Science Jobs: 1) Data Analyst

- Job might consist of tasks like:
  - pulling data out of **SQL** databases
  - becoming an **Excel** or **Tableau** master
  - producing basic **Data Visualizations** and **Reporting Dashboards**
  - On occasion:
    - analyze the results of an **A/B Test**
    - take the lead on company's **Google Analytics account**
- Some companies: **Data Scientist** is synonymous to **Data Analyst**

# Data Science Jobs: 2) ML Engineer

- Some companies: **data** or **data analysis platform** is the product
  - so, **Data Analysis** or **ML** can be pretty intense
  - so, there is a need for someone who:
    - has a formal mathematics or statistics background
    - is hoping to continue down a more academic path
- **ML Engineers**
  - often focus more on producing great **data-driven products**

# Data Science Jobs: 3) Data Engineer

- Some companies: have **lot of traffic** and **large amount of data**
  - so, there is a need for someone who:
    - set up lot of **data infrastructure** that the company will need moving forward
- Job postings listed under **Data Scientist** and **Data Engineer**
  - strong software engineering skills are more important
  - heavy statistics and ML expertise are less important

# Data Science Jobs: 4) Data Scientist

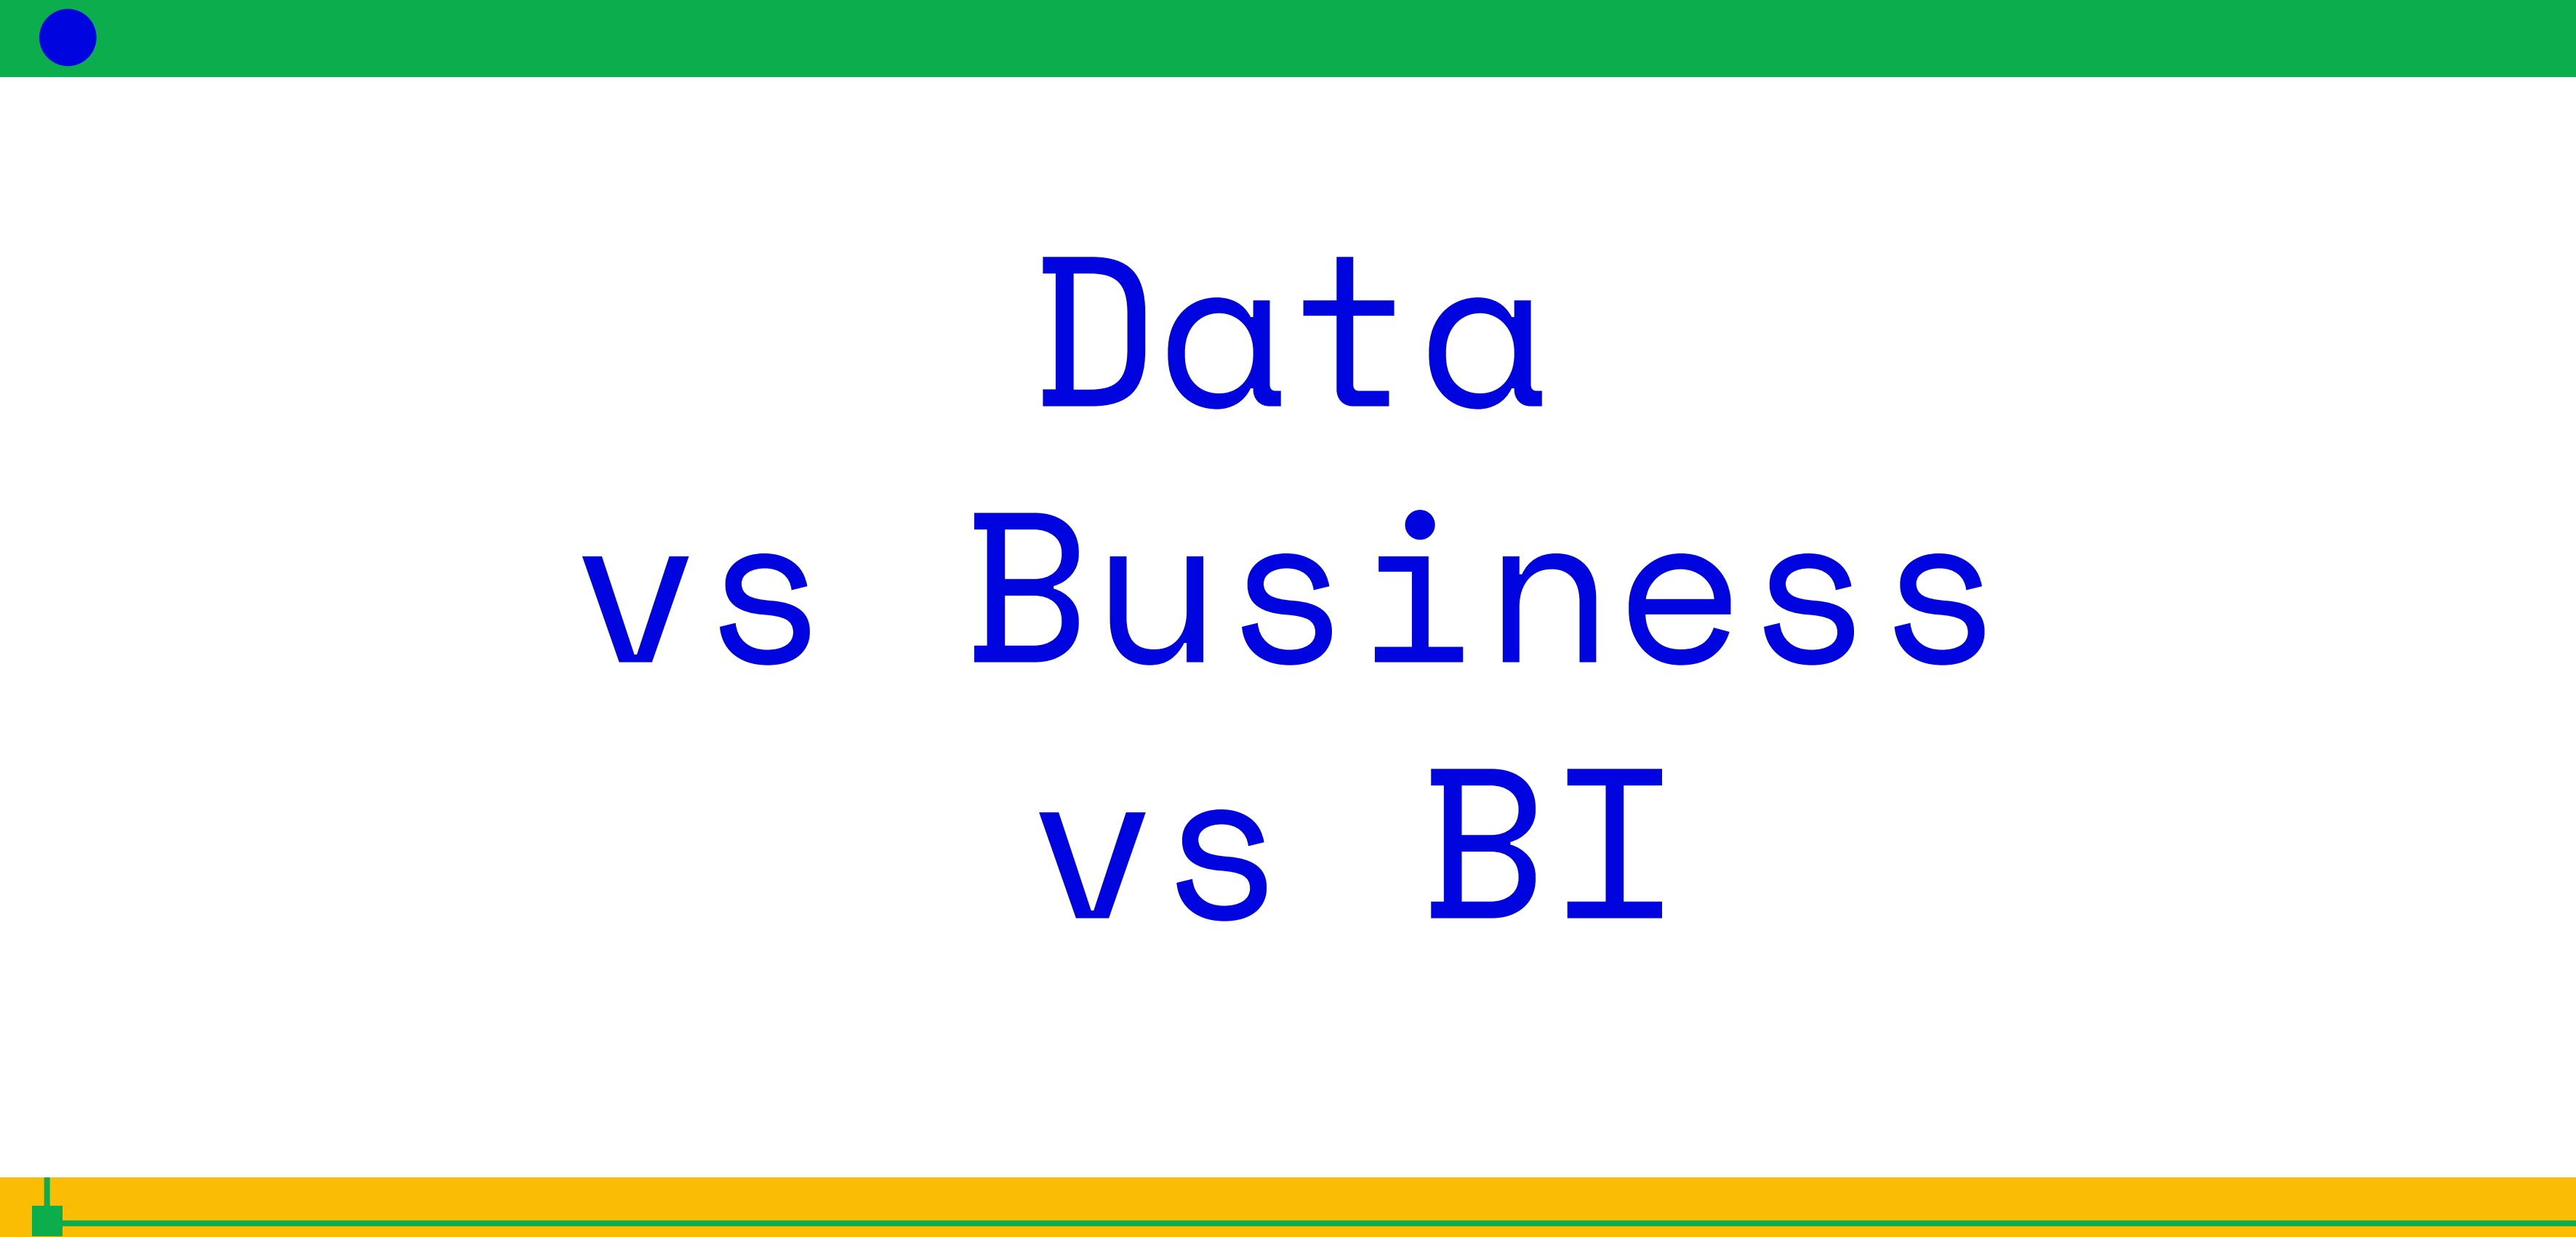

Often used as a blanket title

- to describe jobs that are drastically different

# Data Science Jobs: 5) Data Generalist

- Some companies: look 4 **Generalist** to join data scientists team
  - these companies cares about data but probably isn't a data company
- **Data Generalist** most important skills:
  - familiarity with tools designed for **Big Data**
  - experience with messy, real-life datasets
- **Data Generalist** can:
  - perform analysis
  - touch production code
  - **Visualize Data**

# Data vs Business vs BI

# Business Case Studies

- are real-world experiences of how business people and companies succeed or fail
- examine events that have already happened
- We do not need a dataset to learn from **business cases**
- We could learn from them and attempt to prevent making a similar mistake in future

# Business Case Studies: Example

**Ryanair:** cost-friendly budget airline that sells tickets so cheap

- travel to less busy airports
  - far from the city
  - outside business hours
- charges for almost every small addition
- tries to keep planes for small times on airfields to save on rent
- operates only one type of aircraft to speed out ground crew processes

# Business

# Data?

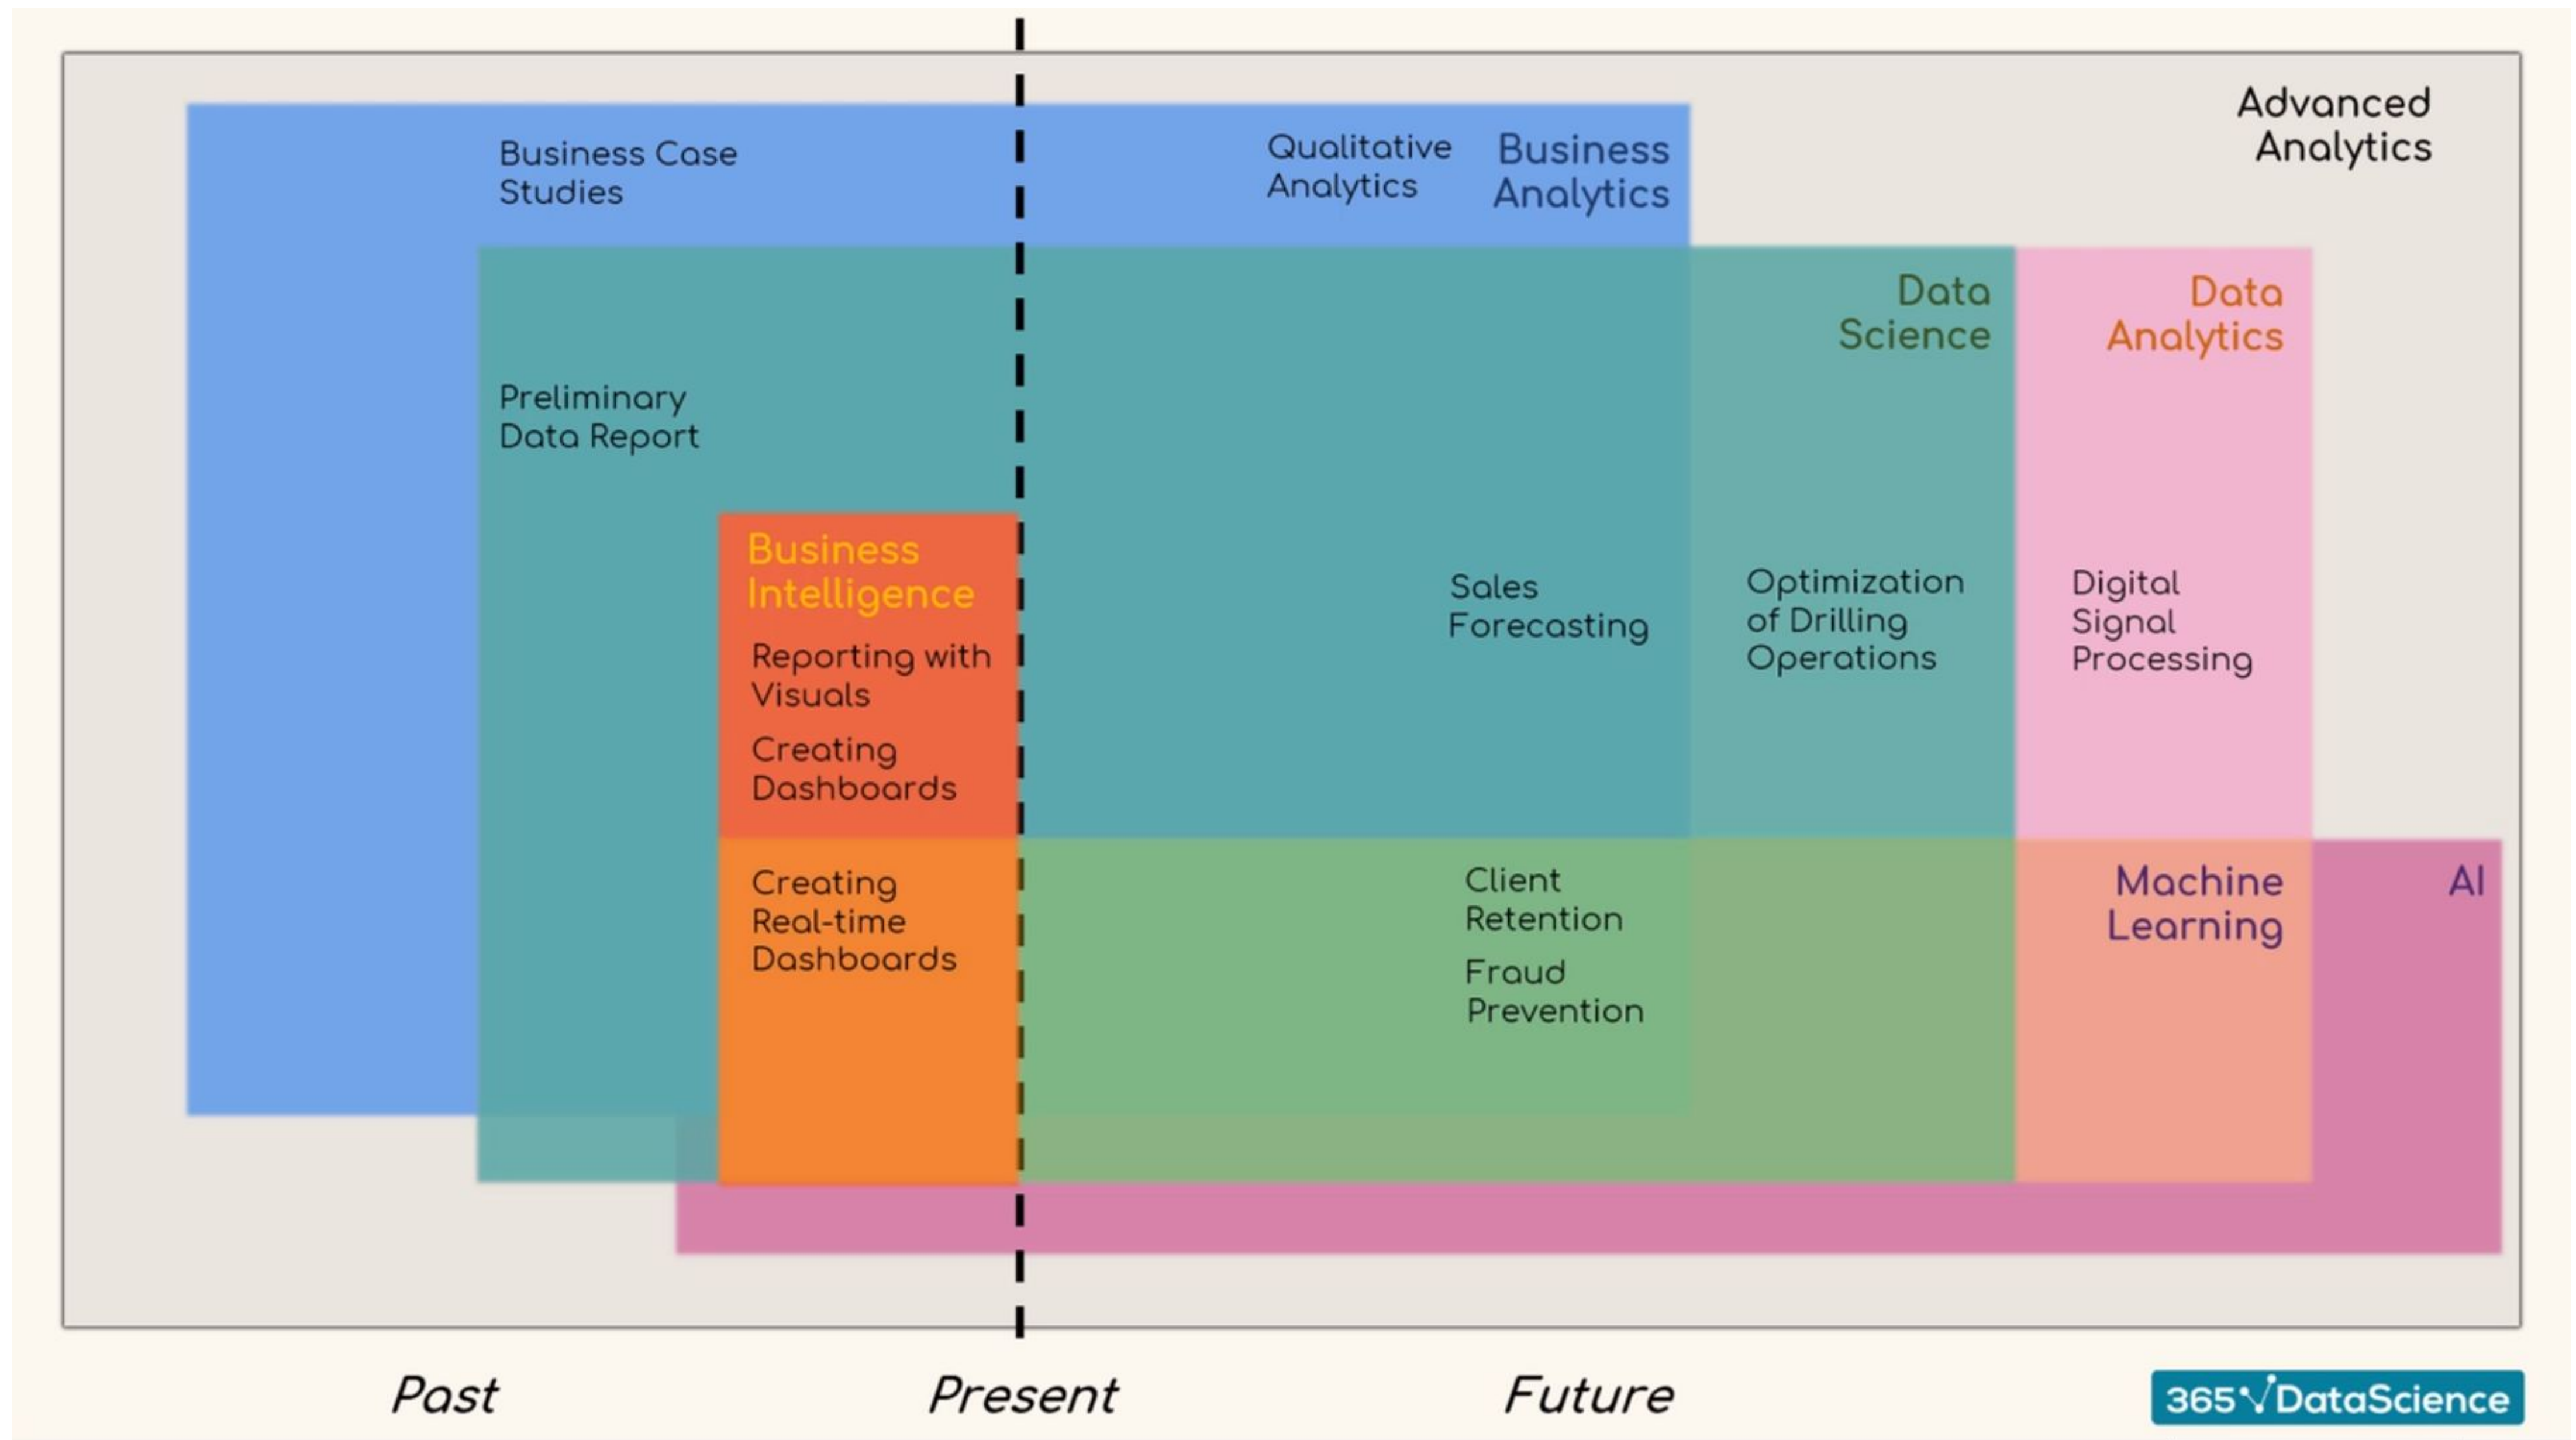

# Data

# 365 DataScience Advanced Data Analytics Diagram

# Data Analysts vs Business Analysts vs BI Analysts

Data Analyst common tasks:

- Working with stakeholders to define a problem or business need
- Identifying and sourcing data
- Cleaning and preparing data for analysis
- Analyzing data for patterns and trends
- **Visualizing data** to make it easier to understand
- Presenting data in such a way that it tells a compelling story

# Data Analysts vs Business Analysts vs BI Analysts

Business Analyst common tasks:

- Evaluating a company's current functions and IT structures
- Reviewing processes to identify areas for improvement
- Interviewing team members to identify areas for improvement
- Presenting recommendations/findings to management and other key stakeholders
- **Creating visuals** and financial models to support business decisions
- Training and coaching staff in new systems

# Data Analysts vs Business Analysts vs BI Analysts

BI Analyst:

- Somewhat of a hybrid between **Business Analyst** and **Data Analysts**
- They use analysis, modeling, and **visualization** of:
  1. industry trends
  2. competitive landscape
- to help businesses cut losses and increase profits
